Soloy Adds Avionic Installation and Servicing Capabilities

OLYMPIA, WA: On December 2, 2009 the Federal Aviation Administration expanded Soloy Aviation Solutions' Air Agency Certificate (HP6R595N) to include Limited Radio and Limited Instrument ratings. To support these expanded ratings Soloy has added three experienced avionic technicians to our staff. The combined experience of Soloy avionic technicians brings over 100 years of troubleshooting and installation experience to our facility.

"Soloy has historically relied on avionics shops throughout the Northwest to support our avionics needs. In recent years it has become increasingly obvious that having an in-house avionic capability is where we needed to be" said Dave Stauffer CEO of Soloy Aviation Solutions. "The current trend to glass cockpits with AHRS, traffic surveillance, WAAS navigation, synthetic vision, obstacle avoidance, satellite based weather and eventual ADS-B equipment was also a driver in our decision to expand our current FAA Air Agency Certificate".

The recent certification of the Soloy Cessna 206H/T206H MKII conversion to Rolls-Royce power has increased our need for in-house avionic upgrades that are often associated with the engine conversion process. The Garmin G500 flight display (picture shown below) updates the pre Garmin 1000 Cessna 206H airplanes to the latest navigational equipment while undergoing the engine conversion process.

SOLOY CESSNA T206H MKII PANEL

Soloy is a member of the Aircraft Electronics Association and is ready to service all your avionics needs from bi-annual transponder checks to full instrument panel upgrades.

Soloy Aviation Solutions is a world-renowned engineering company specializing in the design and development of specialized solutions for the aviation community. Founded more than 40 years ago on the idea of bringing turbine engine technology to piston aircraft, Soloy has engineered and manufactured hundreds of unique aviation products, STC's and patented aviation solutions to enhance fixed wing and helicopter aviation.
